To run this Python code, you need to set up a Python environment on your pc.
steps

1. Install Python
   - If you not installed python, download and install it from [python.org] (I don't know exact url .

2. Install Required Libraries
   Open a terminal (Command Prompt, or Terminal) and run the following commands to install the Python packages:

   pip install requests
   pip install beautifulsoup4

(Else watch you tube tutorial to install these packages)

These commands will install the libraries for web scraping and making HTTP requests.

 3. Running the Code
   - Create a new Python file:
    - Open any code editor like VS Code, PyCharm.
     - Create a new file (e.g., `code for p_c_on e- commerce.py`).
     - write the code

  - Run the Python script:
    - Open a terminal or command prompt.
    - Navigate to the folder where the Python file is saved.
    - Run the Python script using:

   python code for p_c_on e- commerce.py

    This will open the Tkinter GUI window where you can input product names and check the prices on Flipkart and Amazon.
